

PASPALUM NOTATUM

PENSA PRO

Pensa Pro Bahiagrass is a low-maintenance grass bred for sunny coastal lawns. Known for its durability through both hot summers and cold winters, Pensa Pro Bahiagrass thrives even in poor soil conditions.

This sun and drought tolerant grass thrives in lawns that receive eight or more hours of sun. Plant it in the early spring and start to see results within 7 to 21 days.

Appearance in winter

Appearance in summer

- Requires 8 hours per day of sunlight.
- Has excellent sun tolerance.
- The grass has a coarse texture.
- Offers excellent drought tolerance.
- Provides excellent disease resistance.
- Maintains good traffic tolerance.

CHARACTERISTICS

Seeding rate g/m²	5-10
Overseeding rate g/m²	2.5
Seeds per gram	440
Days to germination at 30ºC	7-21
Recommended planting/ sowing dates	Spring - summer
Color	Medium
Establishment	Fast
Growth	Fast
Leaf texture	Thick
Spreading activity	Rhizomes and stolons
Maintenance	Low
Fertilizing needs	Low
Mowing frequency	Low
Mowing height	50-75 mm
Shade tolerance	Medium
Winter dormancy	Below 12ºC
Disease resistance	-
Recovery capacity	Low
Traffic tolerance	Medium
Heat tolerance	High
Drought tolerance	Very high
Salt tolerance	Medium-high

SEEDING RATE

Sowing: 5-10 g/m²
Interseeding: 2.5 g/m²

- Recommended for coastal areas.

IMPLANTATION AND MANAGEMENT

- Sow at a minimum of 18ºC in the soil in ascending phase.
- Bury the seed to a maximum depth of 5 mm. In two crossed passes.
- Water gently and spaced until plant emergence.
- Cutting height from 20 mm, although can accept minimum mowing frequency.
- It does not need fungicide treatments.
- It is recommended autumn overseeding with REPOBLADOR blend at 50 g/m² to maintain the green color in winter, in case of intensive use during this period of the year.
